STUDIO X — Logo Master Guidelines

Version 1.0 • Recreated from the supplied reference artwork

01 / Master construction

The primary mark follows the supplied reference: a bold geometric X split into upper and lower angular sections, with STUDIO set across a clear horizontal centre band. The tagline DESIGN BEYOND LIMITS. sits beneath the symbol. The X geometry has been redrawn as scalable vector polygons.

02 / Logo family

Primary lockup: split X + integrated STUDIO + tagline. Horizontal lockup: STUDIO wordmark followed by the X symbol. Icon: standalone X silhouette. Wordmark: STUDIO X.

03 / Color

Primary black #0A0A0A and white #FFFFFF. Supporting neutrals: #1A1A1A, #4A4A4A, #9A9A9A, #E5E5E5 and #F5F5F5. Use black artwork on light backgrounds and white artwork on black backgrounds.

04 / Typography

The reference specifies Space Grotesk for logo/headings and Inter for body text. SVG files use editable text with those font-family references. PNG previews use locally available sans-serif fonts, so install Space Grotesk and Inter and check rendering in your vector editor before final release.

05 / Usage

Maintain generous clear space around the mark. Do not stretch, rotate, add gradients, shadows, outlines, or change the word spacing. Use the standalone icon for small applications; use the full lockup where the tagline remains legible.

06 / Production handoff

SVG is the scalable vector master. PNG files are raster exports. For commercial printing, open the SVG in a vector editor, install the named fonts, convert text to outlines, inspect alignment and spacing at final size, and export a press-ready PDF. This artwork is a faithful vector recreation of the supplied visual reference, not a guarantee of pixel-identical source geometry or trademark clearance.
